

A. Lesson Context

BIG PICTURE of this UNIT:	<ul style="list-style-type: none"> • What is meant by the term FUNCTIONS and how do we work with them? • mastery with working with basics & applications of linear functions • mastery with working with basics & applications of linear systems • understanding basics of function concepts and apply them to lines & linear systems 		
CONTEXT of this LESSON:	<p>Where we've been</p> <p>In Lessons 5-6 you have been working with systems of equations and solving them with Substitution and Elimination</p>	<p>Where we are</p> <p>Taking a look at some different scenarios that can arise when dealing with the solutions to a system of equation.</p>	<p>Where we are heading</p> <p>How do we apply the concept of "functions" to linear & exponential relations.</p>

B. Lesson Objectives

Recap Last Clas

Solving a System with Substitution and Elimination and analyzing when there are solutions

Solving a System with Substitution and Elimination and analyzing when there are no solutions.

Solving a System with Substitution and Elimination and analyzing when there are infinite solutions.

Solving a system by graphing or with PolySmlt2.

C. Fast Five

Solve the following systems.

$$\begin{cases} 3x + 2y = 5 \\ -6x - 4y = -8 \end{cases}$$

$$\begin{cases} 3x - 9y = 12 \\ -x + 3y = -4 \end{cases}$$

Find values of a and b so that the system $\begin{cases} 4x + 2y = 12 \\ ax + 4y = b \end{cases}$ has exactly one solution. Explain how the graphs of the equations will be related.

Task 1: Systems and the Calculator

a. Solve and verify the following linear systems with the graphing function.

$y = 2x - 4$ and $y = -x + 5$	$2x + 3y - 9 = 0$ and $x - y - 2 = 0$
$y = 5x - 2$ and $6x + 3y = 36$	$x + 4y = -10$ and $2x + y = 1$

b. Solve and verify the following linear systems using POLYSMLT2 © If you are struggling with polysmlt or don't know what it is, go to the link on the website and watch a quick video on it!

$2x - 2y - 14 = 0$ $-2x + 4y - 4 = 0$	$3x - 2y = 17$ $-6x - 2y = 8$
$4x = 9 - y$ $3y - 6x = 9$	$2y + 4 = 6x$ $y + 3x = 1$

Solve and verify the following linear system by graphing or POLYSMLT

$y = \frac{1}{2}x - 3$ and $x + y = -6$	$x + 2y = 2$ and $x - y = 8$
$x + 2y = 7$ and $y = 4x - 10$	$y = -\frac{1}{2}x + \frac{9}{2}$ and $y = 3x - 6$

Substitution:

Create a System: Identify your variables, create the equations, Solve using substitution

You have some Egyptian Pounds in a pile. You know you have 5 LE bills, and 10 LE bills for a total of 210 LE if you add them all. You also know that the number of 10 LE bills is 9 less than twice the 5 LE Bills.

How many of each bill do you have?

There are two new species of animals just discovered on mars. **Spraks** and **Borks**. **Spraks** have 3 legs and **Borks** have 7 legs. All together there are 288 legs on this planet. Also scientists notice that if you take 5 more than double the number of **Borks** you will have the **Spraks**. How many of each species are there?

Is the point $(-3, -6)$ a solution to the system? Why or why not?

$$y = 3x + 9$$

$$x = 2y + 9$$

Please solve using substitution:

(i) $y = 2x - 4$ and $y = -x + 5$

Algebraic Verification:

Graphic Verification:

(ii) $2x + 3y - 9 = 0$ and $y = -x - 2$

Algebraic Verification:

Graphic Verification:

(iii) $y = 5x - 2$ and $6x + 3y = 36$

Algebraic Verification:

Graphic Verification:

Elimination:

Create a System: Identify your variables, create the equations, Solve using elimination.

Regina is training for the upcoming cross country season. She needs to design a daily 45 minute workout using a combination of a stationary bike and a treadmill. To be in top shape, she should burn 400 calories in her workout. On a bike, she burns 8 cal/min and on the treadmill she burns 10 cal/min. How many minutes should she train on each piece of equipment?

As the owner of a banquet hall, you are in charge of catering a reception. There are 2 dinners: a chicken dish that costs \$16 and a beef dish that costs \$18. The 300 wedding guests have ordered the dinners in advance and the total cost to prepare the dinners is \$5256. How many of each type of dinner are you preparing?

You are selling tickets for a musical at ISM. Student tickets cost \$5 and general admission tickets cost \$8. If you sell 500 tickets and collect \$3475, how many student tickets and how many general admission.

Please solve using Elimination

$$\begin{aligned}4x &= 9 - y \\ 3y - 6x &= 9\end{aligned}$$

Algebraic Verification:

Polysmlt Check

$$\begin{aligned}2y + 4 &= 6x \\ y + 3x &= 1\end{aligned}$$

Algebraic Verification:

Polysmlt Check!

$$\begin{aligned}4x + 2y &= 10 \\ 3y - 6x &= 9\end{aligned}$$

Algebraic Verification:

Polysmlt Check!

Practice Creating systems

For the following situations please do the following.

1. Read the problem.
2. Identify your variables
3. Write a system to represent your situation
4. Determine what method you would use to solve the system both algebraically and with technology... i.e. substitution or elimination and Graphing or PolysmIt.

Regina is training for the upcoming cross country season. She needs to design a daily 45 minute workout using a combination of a stationary bike and a treadmill. To be in top shape, she should burn 400 calories in her workout. On a bike, she burns 8 cal/min and on the treadmill she burns 10 cal/min. How many minutes should she train on each piece of equipment?

Variables	System	Circle methods of choice
Let x be... Let y be...		Substitution or Elimination Graphing or PolysmIt

You are selling tickets for a musical at CAC. Student tickets cost \$5 and general admission tickets cost \$8. If you sell 500 tickets and collect \$3475, how many student tickets and how many general admission.

Variables	System	Circle methods of choice
Let x be... Let y be...		Substitution or Elimination Graphing or PolysmIt

Yasser is renting a car. Zeno Car Rental charges \$45 for the rental of the car and \$0.10 per kilometre driven. Erdos Car Rental charges \$35 for the rental of the same car and \$0.25 per kilometre driven. Which company should Yasser choose to rent the car from?

Variables	System	Circle methods of choice
Let x be... Let y be...		Substitution or Elimination Graphing or Polysmlt

The school is putting on the play "Algebra: The Musical". Adult tickets were sold at a cost of \$8 and student tickets were sold at a cost of \$5. A total of 220 tickets were sold to the premiere and a total of \$1460 was collected from ticket sales.

Variables	System	Circle methods of choice
Let x be... Let y be...		Substitution or Elimination Graphing or Polysmlt

Mr. S. has \$18,000 savings in 2 accounts. My total interest earned for the year was \$930. One account earns me 6% annual interest and the other account earns me 3% annual interest. How much do I have in each account?

Variables	System	Circle methods of choice
Let x be... Let y be...		Substitution or Elimination Graphing or Polysmlt

The yearbook club is considering two different companies to print the yearbook. The Descartes Publishing Company charges a flat fee of \$475 plus \$4.50 per book. School Memories charges a flat fee of \$550 plus \$4.25 per book. Which company should the yearbook club select to print this year's yearbook?
